

NETSO ENERGY — WEBSITE MASTER PLAN

P.A.G.E.S. Framework: 3D Scroll-Triggered Storytelling Site

For Bangladesh's First Premium Solar Pergola RESCO

Prepared by: Netso Strategic Design Office

Date: April 2026

Version: 1.0 — FULL BRIEF

PART I — COMPETITIVE ANALYSIS & MARKET INTELLIGENCE

1.1 Reference Site Deconstruction

fluid.glass — What They Got Right

Fluid Glass, built by Exo Ape, is arguably the best single-product premium website in the architectural materials category. The anchor of their experience is a **full-bleed cinematic video loop** that runs under headline copy, giving the product gravitas before a single word is read. Their structure follows a clean editorial logic: hero → product philosophy → product collection grid → showroom (physical trust anchor) → featured projects → testimonials → CTA. What makes it unforgettable is **restraint + craftsmanship** — generous whitespace, one font system, muted editorial photography, and scroll-triggered reveals that feel inevitable rather than flashy. The "Crafted by Exo Ape" credit is a signal: this level of execution requires a specialist 3D/motion studio, not a template.

What Netso borrows: Full-bleed video hero. Project case studies as proof. Testimonial as social proof. Ultra-clean nav. Footer as brand statement.

igloo.inc — What They Got Right

Igloo's site (though content-minimal in scrape) is known in the design community for its **immersive 3D environment on scroll** — the user literally enters a three-dimensional space and navigates through it. It is a WebGL-powered experience built to communicate a single promise: *this product creates a world, not just a room*. The anchor of the experience is

spatial — you don’t read about the product, you inhabit it.

What Netso borrows: The spatial metaphor. The idea that you don’t watch the product, you *enter* it. Scroll as a camera dolly. 3D scene as the storytelling medium.

The Synthesis: Netso’s Unique Position

Fluid.glass = editorial craft + physical product credibility
Igloo.inc = spatial immersion + “you are inside the story”
Netso = industrial poetry + social mission + financial logic

No solar website in the world has merged immersive 3D storytelling with the specific visual language of Dhaka rooftops, RMG factories, and the human story of Bangladesh’s energy transition. That gap is Netso’s to own.

1.2 Competitive Landscape — Solar Pergola Websites Globally

Company	Region	Website Quality	Differentiator	Netso Gap
EnVision Solar Pergola	USA	Mid-tier	Patented BIPV roof	No 3D, no story
Go Solar Power	USA	Low-mid	3D CAD proposals	Sales tool, not brand
Solar States (Brooklyn Canopy)	USA	Editorial	Lifestyle photography	No industrial angle
Solaric Bangladesh	BD	Basic	First-mover OPEX RMG	Zero design sophistication
GGI (Greener Garments)	BD	Institutional	IFC-backed credibility	NGO aesthetic, not brand
SolarEdge Designer	Global	Tool	AI rooftop modeling	B2B SaaS, not brand

The verdict: No company in Bangladesh has a premium web presence for solar. Globally, no solar pergola brand has built a scroll-storytelling 3D site. Netso has a completely open field.

1.3 Bangladesh Market Context (Critical for Narrative)

The site's story must be grounded in facts that make the customer feel urgency, not just aspiration:

- Bangladesh's RMG sector represents **85% of national exports**, and European/North American buyers are now imposing carbon audits on their supplier factories.
- Only **245 MW** of rooftop solar had been installed nationally as of mid-2025 — less than 1% of industrial rooftop potential.
- OPEX model adoption is accelerating: Majumder Group (518 kWp), Coats Bangladesh (455 kWp), Barotopa Printers (750 kWp) have all signed OPEX deals in the past 18 months.
- Grid tariffs (LT-E rate: BDT 10.30/kWh) are rising quarterly due to LNG import costs; Netso's PPA rate undercuts this from Day 1.
- Bangladesh's government has announced a 3,000 MW National Rooftop Solar Program — the regulatory tailwind is real.
- IFC's Greener Garments Initiative has activated over 200 factories; **Netso enters a market that is proven but massively underserved by premium operators.**

The website must weaponize this context: the factory owner who watches this site must feel that *not acting is the risk*.

PART II — P.A.G.E.S. FRAMEWORK

P — PURPOSE

Primary Audience: Factory owners and managing directors of RMG facilities in Gazipur, Narayanganj, Ashulia, and Chattogram EPZ. Male, 40–65, Bangla-first thinking, status-conscious, financially conservative, compliance-pressured by global buyers.

Secondary Audience: International ESG-aligned buyers (H&M, Inditex, PVH) researching supplier sustainability credentials. Impact investors and DFI partners evaluating the Netso opportunity.

The One Job This Website Must Do:

Make the factory owner feel that Netso is the only partner who *understands their roof, their risk, and their ambition* — and move them to request a site assessment.

The Emotional Arc the Visitor Must Travel:

Skepticism → Recognition → Desire → Trust → Action

The Anchor Line (Brand Tagline):

"The Sky Is Already Working."

This is the hook. It reframes the factory roof — a previously ignored, heat-generating liability — as an asset that has been silently waiting. It's poetic, confident, and distinctly Bangladeshi in its pragmatic optimism.

Supporting sub-anchors:

- *"You've been paying for energy that falls on your roof every day."*
- *"Zero investment. Guaranteed savings. Your roof, finally earning."*
- *"Built for Dhaka. Engineered for decades."*

A — ARCHITECTURE

Site Structure (7 Chapters, One Continuous Scroll)

The entire site is a **single-page scroll narrative** with no traditional navigation between sections — the user moves through a story, not a menu. A minimal fixed nav appears on scroll with only: Logo | Our Solution | Projects | Contact.

CHAPTER 0 — THE ENTRY (Preloader)

Duration: 2.5 seconds

A black screen. A single particle of light — like a photon — travels from the top-right corner diagonally down to the center, where it collides with the Netso wordmark and explodes it into existence. The tagline fades in beneath:

THE SKY IS ALREADY WORKING.

Then: the world loads.

CHAPTER 1 — THE WORLD (Hero)

Scroll length: 150vh

A 3D scene opens: the camera is positioned at mid-air, angling down at a **photorealistic Bangladesh rooftop at dusk** — concrete, water tanks, the distant glow of factory

fluorescent lights, and smog-haze horizon. The scene is silent except for ambient factory hum. The roof is bare.

As the user scrolls, the **camera slowly descends**, closing in on the empty rooftop. Copy fades in on the left:

*"Every day, 5.5 peak hours of sunlight fall on your roof.
Every day, you pay BDT 10.30 per unit to the grid.
That ends today."*

At the bottom of the scroll, the camera lands gently on the rooftop surface — and then the **Netso Pergola rises from the concrete**, panel by panel, in a slow 3D construction animation. Steel frame first, then rafter arms, then crystalline panels snapping into place. The sky shifts to golden hour. The panels begin to glow.

CTA: A single line appears — [Explore the upgrade ↓](#)

CHAPTER 2 — THE PROBLEM (The Cost of Doing Nothing)

Scroll length: 200vh

This is the tension chapter. The camera pulls back to reveal a **top-down view of a factory block in Gazipur** — rendered in 3D, grey, industrial. Energy cost counters tick upward in real-time across multiple factory rooftops (animated numbers). A heat-map overlay bleeds red across unshaded roof surfaces.

The narrative voice delivers three punches, one per scroll step:

"Your electricity bill is rising every quarter."
(Counter: BDT +12.4% avg tariff increase, FY2024)

"Your buyers are asking about carbon."
(Document icon: H&M Supplier Sustainability Requirements, 2025)

"Your competitor just signed a solar PPA."
(Map pin drops on a competitor factory 3km away)

This section must feel like a reckoning — not a lecture. The tone is surgical.

CHAPTER 3 — THE SOLUTION (The Netso Pergola)

Scroll length: 300vh — the centrepiece

The camera descends back to rooftop level. A fully-rendered **Netso PowerRoof/Pergola** now occupies the entire roof — gleaming black crystalline panels on a gunmetal steel

pergola frame. The lighting shifts to brilliant midday sun. Shadow patterns fall beautifully through the panels.

This chapter uses **horizontal scroll panels within the vertical story** (like a product carousel locked to scroll position). Each horizontal panel reveals a different dimension of the product:

Panel A — The Structure

A 3D exploded-view animation: the pergola deconstructs into its components. Label callouts appear for each part with micro-copy:

- *Crystalline Monocrystalline Panels — 22%+ efficiency*
- *Hot-dip galvanized steel frame — 25-year structural warranty*
- *Dual function: shade + power*
- *No roof penetration required*

Panel B — The Economics

A clean financial dashboard slides in. Animated bars show:

- Your current monthly bill: **BDT 4.2L/month** (example 100 kW factory)
- Netso rate: **BDT X/unit** (below LT-E grid)
- Savings from Day 1: **BDT X/month**
- Year 10 cumulative saving: **BDT X crore**
- Your CAPEX investment: **BDT 0** A single line: *"Zero upfront. Savings from Month 1."*

Panel C — The Process

A timeline animation: 6 steps from site assessment to commissioning, illustrated in 3D icons:

1. Free Rooftop Assessment (7 days)
2. Custom System Design + 3D Rendering
3. NEM Registration (Netso handles it — BDT 20,000 value)
4. IDCOL-Backed Financing Arranged
5. Installation (45–60 days)
6. Go Live + 24/7 Monitoring

Panel D — The Guarantee

A scroll-triggered stamp animation: a Netso seal drops onto screen.

"10-year PPA. 25-year panel warranty. O&M included. You pay only for the units you use."

CHAPTER 4 — THE PROOF (Projects & Social Trust)

Scroll length: 200vh

Camera rises to a **bird's-eye view of multiple Dhaka factory rooftops**, each with a glowing Netso installation. Each installation is clickable — hovering on one pulls up a micro case study card:

- Factory name (or "Gazipur RMG Client, 2025")
- Installed capacity
- Monthly savings
- Carbon offset (tonnes CO₂/year)
- Client quote — one line

The visual language shifts slightly here: real photography composited into the 3D scene. This is where the pilot 3.5 kW system on the Chattogram building becomes a proof asset — framed as the founder's personal test before market launch.

Below the map: a **horizontal ticker** runs continuously with market validation stats:

200+ factories activated under IFC's Greener Garments Initiative • BDT rooftop solar market growing at 12% CAGR • BPDB National Rooftop Solar Program 2025 — BOO/OPEX model officially endorsed •

CHAPTER 5 — THE PEOPLE (Trust & Credibility)

Scroll length: 150vh

A quieter chapter. The 3D environment softens — warm interior lighting, less kinetic energy. This is the human moment.

Two columns: on the left, a looping video or high-res photograph of a factory floor — workers, machines, the hum of production. On the right, copy:

"Bangladesh's factories built the world's wardrobes.

Netso is here to power the next chapter.

We are a Build-Own-Operate solar partner — not a vendor, not a contractor.

We carry the capital. You keep the savings."

Below: **Founder's note** — a single paragraph from Taz (Tazwar Mahtab), framed without a

formal title. No “CEO” box. Just a name and a conviction:

“I built Netso because I watched factories pay impossible electricity bills while the Dhaka sun went to waste every day. This company exists to fix that.”

Then: Farzana Group’s founding connection — “Rooted in garments. Building for the future.” This is the moat moment, delivered without arrogance.

Institutional logos: IDCOL | SREDA | DESCO/DPDC NEM Programme

CHAPTER 6 — THE CALL (CTA & Contact)

Scroll length: 100vh

The camera returns to the rooftop from Chapter 1 — but now the pergola is installed, glowing, and it’s **dawn in Bangladesh**. The adhan plays faintly (optional, toggleable). The sky shifts from deep indigo to gold.

A single centered block:

Get Your Free Rooftop Assessment

No cost. No commitment. Just numbers.

A minimal form (3 fields): Factory Location | Approximate Roof Area (sq ft) | Monthly Electricity Bill (BDT)

Button: REQUEST ASSESSMENT →

Below the form, two trust micro-signals:

- “Typically respond within 24 hours”
- “Assessment completed within 7 working days”

Then the footer — minimal, black, with Netso wordmark and:

Netso Energy Limited | Dhaka, Bangladesh | netso.energy

Social: LinkedIn · WhatsApp Business

G — GRAPHIC DESIGN SYSTEM

Visual Identity Directives

Color Palette

- Primary: #0A0A0A (near-black) — the dark rooftop, the night sky
- Accent 1: #E8C547 (solar gold) — the sun, energy, wealth
- Accent 2: #2A7D4F (deep evergreen) — sustainability, Bangladesh
- Surface: #F4F1EB (warm off-white) — concrete warmth, tactile trust
- Data: #4A9EFF (electric blue) — counter animations, energy flow lines

Typography

- Display (Hero, Chapter Titles): **Neue Haas Grotesk Display** or **PP Neue Montreal** — broad, authoritative, Bauhaus-adjacent. Not cute. Not techy.
- Body: **Instrument Serif** — warmth, editorial credibility, slightly literary
- Data/Numbers: **Geist Mono** — precision, technical authenticity
- Bengali-language elements: **Kalpurush** or **Noto Serif Bengali** — for the PPA summary overlay and any BD-language content

Motion Design Principles

- All scroll animations: `cubic-bezier(0.16, 1, 0.3, 1)` — a fast-in, slow-out easing that feels physical and premium (identical to Apple's spring)
- 3D scenes: Three.js or Spline, exported as a single WebGL canvas
- No autoplay audio without user consent; ambient audio toggle visible
- Particle system for energy flow (photons traveling panel → inverter → grid)
- Page transitions: none (single scroll; no page breaks)
- Cursor: custom — a small solar ring that pulses on hover over interactive elements

Photography Art Direction

- No stock photography
 - Real: the 3.5 kW pilot system on the Chattogram building (shoot this — it is the brand's origin story in a single image)
 - Commissioned: drone footage of Gazipur/Narayanganj industrial areas at golden hour
 - 3D renders: the Netso Pergola model (build in Blender, export to Three.js or Spline)
 - Workers: authentic, dignified — not poverty narrative, not corporate happiness
-

E — EXECUTION PLAN

Technology Stack

Frontend: Next.js 14 (App Router) + TypeScript

3D Engine: Three.js + React Three Fiber + Drei

Scroll Engine: GSAP ScrollTrigger (industry standard for this type of site)

Smooth Scrolling: Lenis (used by igloo.inc category)

Shader effects: GLSL via Three.js ShaderMaterial (for panel glow, energy flow)

Deployment: Vercel (edge, global CDN, excellent Next.js support)

CMS (for projects/case studies): Sanity.io

Form backend: Resend + Notion API (assessment requests go directly to a Notion CRM)

Analytics: Plausible (privacy-first, GDPR-compliant, no cookie banner needed)

Build Phases

Phase 1 — Foundation (Weeks 1–2): BDT 0 cost if self-built

- Next.js scaffold + routing
- GSAP + Lenis integration
- Chapter 1 hero: static rooftop scene in Three.js (no animation yet)
- Typography system + color tokens in CSS variables
- Mobile-first layout scaffolding

Phase 2 — 3D World (Weeks 3–5): Primary investment

- Commission or build the Netso Pergola 3D model (Blender) — if outsourcing: ~\$300–600 on Fiverr/Upwork from a BD or Indian 3D artist
- Chapter 1: scroll-driven camera descent + pergola construction animation
- Chapter 2: top-down factory view + heat map overlay
- Chapter 3: exploded product view + horizontal scroll panels

Phase 3 — Content & Proof (Weeks 6–7)

- Photography shoot: Chattogram pilot system (1 day, 1 photographer)
- Drone footage: Gazipur/Narayanganj (1 half-day)
- Case study cards for Chapter 4
- Financial dashboard animation (real numbers)

Phase 4 — Polish & Launch (Week 8)

- Performance optimization (3D scenes lazy-loaded, compressed textures)
- Mobile adaptation (3D → 2.5D parallax on mobile; full 3D on desktop)
- SEO: `netso.energy` with structured data for local BD search
- WhatsApp Business integration on CTA
- Soft launch to first 10 factory prospects

Performance Targets

- Desktop Lighthouse score: ≥ 85
- LCP (Largest Contentful Paint): $< 2.5s$ (3D canvas deferred load)
- Mobile experience: Graceful degradation — 2D parallax replaces WebGL on low-end devices (target: Xiaomi Redmi, Samsung A-series — the BD business owner's phone)

Budget Estimate (Lean Founder Build)

Item	Estimated Cost
Domain (<code>netso.energy</code>)	Already held / ~\$15/yr
Vercel Pro	\$20/month
Sanity CMS	Free tier initially
3D Model (Pergola) — commissioned	\$300–600
Photography (Chattogram shoot)	BDT 8,000–15,000
Drone footage (1 session)	BDT 12,000–20,000
Font licenses (PP Neue Montreal)	\$200–400
Total	~\$700–1,200 USD

If built personally with no agency: **Zero dev cost**. This is the founder-builder advantage.

S — STORY (The Narrative Bible)

The Core Story in One Sentence

Netso installs the infrastructure of tomorrow on the factories of today, at zero cost to the factory owner, so Bangladesh can power its own future.

The Visual Metaphor System

The entire site operates on a single visual metaphor: **the journey of a photon.**

A photon leaves the sun. It travels 93 million miles. It reaches Dhaka. It hits an unshaded factory rooftop — and is wasted as heat. Then: it hits a Netso panel. It becomes electricity. It powers a sewing machine. A shipment of garments leaves for Hamburg. A factory owner reads a savings report. His daughter goes to university.

This chain — from sun to human aspiration — is the Netso story. The 3D animations trace this chain. The copy narrates this chain. The CTA completes it.

Chapter-by-Chapter Copy Brief

Chapter 1 Hero (Anchor moment):

The Sky Is Already Working.

Every day, 5.5 peak hours of solar irradiance
fall on your factory roof.

Every day, you pay BDT 10.30 per unit to the grid.

Today, that changes.

Chapter 2 (The Problem):

Your electricity bill increased three times last year.
Your buyers asked about your carbon footprint.
A competitor in Tongi just went solar.

The question isn't whether to upgrade.
It's whether to do it first.

Chapter 3 (The Solution — Economic hook):

The Netso PowerRoof.

A steel-and-crystalline structure that turns your
dead rooftop into your cheapest electricity source.

No capital investment.
No maintenance burden.
No risk.

Just a lower bill. From Day 1.

Chapter 5 (Trust):

We are not a solar vendor.
We are your energy partner for the next decade.

We own the system.
We maintain it.
We guarantee the output.

You pay only for the electricity you use —
at a rate below the grid. Forever.

Chapter 6 (CTA — The Close):

Your roof has been waiting.

Get your free assessment.
We'll tell you exactly how much you save.
No commitment. Just numbers.

PART III — COMPETITIVE MOAT SIGNALS TO EMBED

The following facts must be woven naturally into the site's copy and data displays — not as a features list, but as environmental proof:

1. **NEM Registration-as-a-Service** — Netso is one of the only operators in BD offering this at BDT 20,000 flat. Put this in the process chapter as a visible differentiator.
2. **IDCOL-backed financing** — Display the IDCOL logo in Chapter 5. Factory owners know IDCOL. It is the single most powerful trust signal in the BD green infrastructure space.
3. **Family access to factory rooftops (Farzana Group)** — Never stated directly. Implied by: "We started on a rooftop we know well." The Chattogram pilot photo does this work silently.

4. **BPDB National Rooftop Solar Program** — In the ticker. Signals government alignment without claiming government endorsement.
 5. **OPEX/BOO model specifics** — Prominently placed. “We own it. You save.” This is the product.
-

PART IV — MOBILE STRATEGY

Bangladesh’s target customers primarily use **Android mid-range devices** (Samsung A-series, Xiaomi Redmi). Full WebGL 3D is not viable on these devices.

Mobile Adaptation Rule:

- Chapter 1: Replace full 3D scene with a **cinematic video** (pre-rendered from the 3D scene) with parallax-on-scroll
- Chapters 2–4: Use 2.5D layered parallax (CSS `perspective + translateZ`)
- Counter animations and data dashboards remain (lightweight canvas)
- Chapter 6 CTA: WhatsApp-first on mobile (one tap → opens WhatsApp with pre-filled message: “Assalamu Alaikum, I want a free rooftop assessment for my factory in [location].”)

WhatsApp CTA is non-negotiable for mobile in the BD market. This single decision will drive more conversions than any other design choice.

PART V — SEO & DISCOVERY STRATEGY

Target Keywords (Bengali + English):

- “rooftop solar Bangladesh” / “রুফটপ সোলার বাংলাদেশ”
- “OPEX solar factory Bangladesh”
- “solar pergola Bangladesh”
- “IDCOL solar financing”
- “garment factory solar energy”
- “Netso Energy” (brand)

Content Strategy (post-launch): Phase 1: The main site is the anchor Phase 2: A Bengali-language blog with 4 articles: (1) How the OPEX model works, (2) NEM registration guide, (3) What European buyers now require from RMG factories, (4) Case study: Factory X saves BDT X/month

LinkedIn strategy: Taz posts a 60-second Reels-format clip of the website scroll experience. Target: procurement managers and factory owners. One post, organic reach.

APPENDIX A — PRODUCTION CHECKLIST

- Secure `netso.energy` domain
 - Set up Vercel project + GitHub repo
 - Commission Netso Pergola 3D model (Blender, GLTF export)
 - Book Chattogram photography shoot
 - Book Gazipur drone session
 - License PP Neue Montreal + Instrument Serif
 - Set up Sanity CMS schema (projects, testimonials)
 - Build assessment form → Notion integration
 - Create WhatsApp Business number + auto-response
 - Write all 6 chapters of copy (EN + Bengali)
 - Film/render preloader animation
 - Integrate Plausible analytics
 - Performance audit before launch
 - Test on Samsung A14 / Xiaomi Redmi 12 (target device)
 - Soft launch to 10 prospects
 - Iterate on conversion data
-

APPENDIX B — THE IGLOO + FLUID SYNTHESIS,

VISUALIZED

FLUID.GLASS provides:

Editorial restraint
Product photography
Project proof cases
Trust through craft
Physical → Digital bridge

IGLOO.INC provides:

Spatial immersion
Camera-as-protagonist
Scroll-as-navigation
World-building
User is inside the story

NETSO SYNTHESIS:

A 3D Bangladesh rooftop that the visitor inhabits.
Editorial precision in every line of copy.
A product that reveals itself through architecture.
Proof through case studies, not claims.
A financial argument delivered with aesthetic confidence.

"The sky is already working. The question is who captures it first."

— Netso Energy Limited

Dhaka, Bangladesh

Document End. Classification: Internal Strategy — Founder Copy.
