

NETSO ENERGY — MASTER STRATEGIC REPORT (2026)

1. Core Insight (What This Actually Is)

Netso is not a solar installation company. It is an infrastructure-backed cashflow business (IPP model) using distributed solar assets.

Core engine: CAPEX financed → long-term contracted revenue → debt amortization → free cashflow expansion.

2. Business Model Mechanics

Structure: RESCO / BOO (Build-Own-Operate)

Customers pay per kWh below grid price. Netso retains asset ownership.

Revenue split: Years 1–10 debt service phase, Years 11–20 pure cashflow.

3. Strategic Advantage

Primary moat: Farzana Group (captive pipeline, zero CAC, instant credibility).

Secondary moat: NEM registration + execution complexity.

Hidden moat: financing + regulatory knowledge stack.

4. Product Strategy

Netso Pergola = premium brand wedge (design-driven)

Netso PowerRoof = scale engine (industrial deployment)

Insight: Pergola builds brand, PowerRoof builds wealth.

5. Financial Model Breakdown

Metric	Value
CAPEX	BDT 90,000/kW
Debt	80% (IDCOL)
Interest	6%

Tenor	10 years
Tariff Benchmark	BDT 10.30/kWh
Export Rate	BDT 6.45/kWh

6. Execution Roadmap

Deal 1 = critical unlock (valuation + fundraising trigger)

Deals 2–3 = scale replication

Deal 4+ = battery integration (margin expansion)

7. Risk Analysis

Single founder bottleneck

Regulatory delay (IDCOL/SREDA)

Tariff policy risk

Execution delay on Deal 1

8. What Was Missing (Critical Additions)

A. This is an IPP roll-up strategy, not a startup

B. The real value is terminal cashflow, not early revenue

C. Financing velocity = growth speed

D. Execution bottleneck is the biggest risk, not market demand

9. Strategic Recommendations

1. PRIORITIZE Deal 1 above everything else

2. SYSTEMIZE financing + deployment pipeline immediately

3. AGENTIZE operations (Paperclip system execution)

4. Prepare investor narrative as 'Distributed Energy Infrastructure Platform'

10. Immediate 30-Day Plan

Week 1–2: Close Deal 1

Week 2–3: Lock IDCOL financing

Week 3–4: Launch investor outreach

Parallel: Deploy operational agents
